Summary

Self-driven and versatile engineer professional with an expertise in computer systems seeking a position in IT. 10 years of experience in identifying and troubleshooting hardware and software. Knowledgable in System Administration, Operating Systems (Linux/Windows) and cybersecurity. Recognized for consistency, reliability and ability to perform under pressure.

Professional Experience

TACT: Technology Instructor (2024 - Current)

Empower and educate individuals with autism with knowledge in STEM and soft skills with the goal of gaining employment. Hard skills covered include but not limited to 3D modeling, 3D printing, cybersecurity and vector graphics. Soft skills covered include but not limited to communication, work ethic and teamwork.

- Plan and teach individualized lesson plans for over 18 clients covering hard skills and soft skills
- Create effective, diverse communication methods that enhance growth and productivity
- Create a system to monitor and track client progress throughout the curriculum
- Handle HIPAA records to ensure client accommodations are met while maintaining confidentiality
- Maintain and establish a safe, inclusive environment for a diverse community
- Utilize CPI (Crisis Prevention Intervention) training and collaborate with Behavior team to de-escalate clients

IBM Systems: Product Safety Design Engineer, Project Manager (2015-2022)

Developing detailed hardware designs for IBM servers and components while ensuring product safety compliance. Responsibilities include performing lab safety measurements, generating agency reports, reviewing specifications and schematics, troubleshooting issues, and interpreting industry standards such as UL 60950-1 and UL 62368-1.

- Communicate with Product Managers and Executives status of up to 3 products
- Collaborate with Product Development teams to ensure products comply with product regulations
- Manage technical development plans, maintain hardware roadmaps, and analyze designs for proper voltage, current, and power management according to safety guidelines
- Assist with early system bring-up and hardware configuration
- Successful product launches of z14, z15, z16, Power10
- Inventor on over 10 patents https://patents.google.com/?inventor=byron+s+green&oq=byron+s+green

Education

The Pennsylvania State University

- B.S. Electrical Engineering
- Graduated May 2015

Technical Projects

Home Infrastructure Lab (2024 – Current)

Design and maintain an on premise self-hosted infrastructure environment for accelerated learning in IT, System Administration and DevOps. Maintain a 99% uptime high availability environment including power redundancy, manage 3 nodes and DNS failover.

Operating Systems

- Proxmox, Unifi, Linux (Debian, Arch, NixOS), TrueNAS, Windows, MacOS, Home Assistant

Networking (Unifi)

- Deploy and manage 4 VLAN to ensure secure network segmentation
- Implement firewall, IDS and IPS policies that have successfully notified and blocked inter VLAN traffic, incoming and outgoing traffic
- Manage a local DNS server for over 20 devices that contains local DNS records and filters queries to provide network wide security and privacy
- Deploy a VPN server to provide users secure remote access to services

Virtualization & Containerization (Proxmox, Docker)

- Deploy and oversee 30+ containers and VMs on a Type 1 hypervisor
- Manage resource allocation to optimize performance and efficiency of hardware
- Automate weekly backup and update schedules to maximize efficiency

Storage Solution (TrueNAS)

- Deploy storage redundancy and disaster recovery policies to ensure data integrity and availability

Monitoring and Automation

- Design and deploy frontend applications to monitor and automate backend services
- Utilize tools such as n8n (automation) and Home Assistant (IoT automation and monitoring) to communicate with APIs using TCP/IP, HTTP/HTTPS and SSH protocols
